

Student researcher final feedback session

- ~60 minutes – depending how chatty the students are.

In 2s or 3s take 5 minutes to discuss the following:

1. How did you find the process of gathering peer feedback?
 - When / how / from whom did you gathered peer feedback?
 - How did you capture and record your feedback?
 - What was the most effective way?
2. What, if any, challenges or difficulties have you faced when gathering the feedback and how were these resolved?
3. What more could we have done to prepare you for the task of gathering peer feedback?
4. How well supported have you felt by your teacher(s)?
5. What other support or preparation would you have liked?
6. What could we do differently when setting up similar groups in the future? (Any advice for us to help the group succeed?)

Open general discussion:

1. What, if anything, have you learnt about yourself from taking part in the Student Research group?
2. What new skills have you gained? (i.e., teamwork, confidence, notetaking, analytical skills, etc)
3. How useful or not was the group identity / name?
4. Overall, how have you felt about being part of the group?
 - a. Would you be more or less likely to volunteer to do something similar in the future?
 - b. Would you encourage other students to be part of something similar?
 - c. How would you encourage other students to take part?
